

# AN INSTRUMENT PROTECTOR FOR HAMEL ARPENTAGE

## CUSTOMER'S SITUATION

Hamel Arpentage's newly acquired measuring instrument proved fragile when exposed to the elements. Every time it was damaged on a site, work stopped and the repairs cost thousands of dollars.

## SOLUTION

Since the device has several moving parts, we designed a custom protective casing—a rigid shell that allows the instrument to move freely inside the protector.

## ADVANTAGES

A prototype tested in the field by our client was a resounding success. Satisfied with the results, our client is now looking to share the good news with other companies who use the same instrument.
